

DVSR 5000 Series

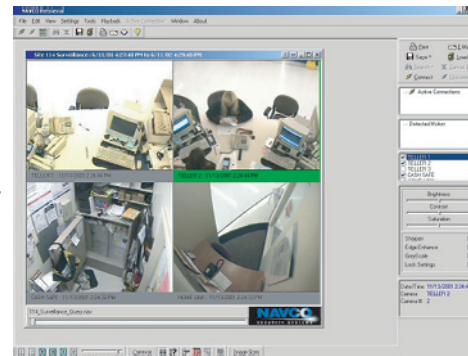

Digital Video Recorder
Financial and
Commercial Solution

4 to 16 cameras
120 to 1000 Gb Hard Drive
365 days of storage

NAVCO's Digital Video Storage and Retrieval Systems track local bank teller/ATM transaction, local video surveillance, and alarm events while providing remote site retrieval for immediate resolution of customer disputes and Regulation "E" claims. Each type of images are stored separately, and can be programmed with separate retention periods. Information can be retrieved via dialup or over the bank's network. The NAVCO 5000 series greatly reduces the time and expense required to resolve customer disputes and eliminates the need to retrieve videotapes from remote sites. The 5000 series gives you more time to check on asset shrinkage, transaction fraud, and alarm surveillance, which lowers your losses and protects your profits.

NAVCO's Retrieval Software

KEY FEATURES

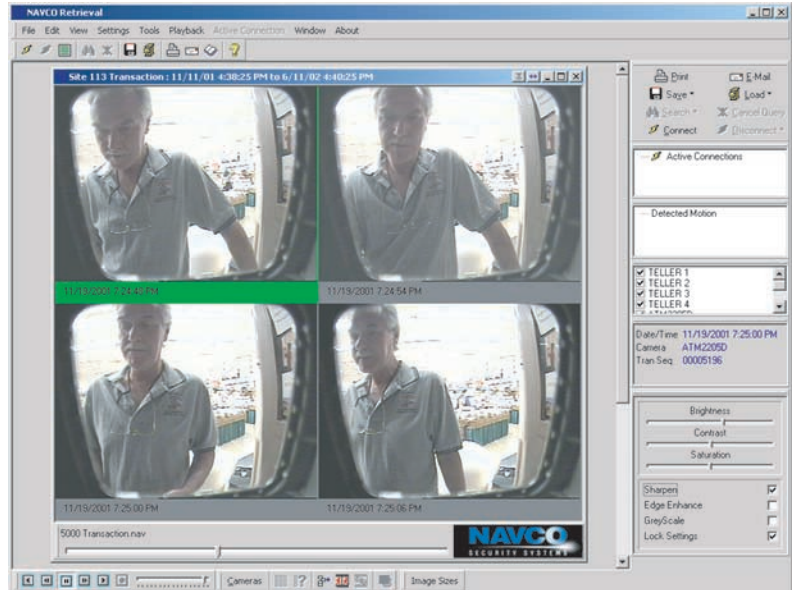

- | | |
|------------------------------|---|
| Easy to use software | NAVCO's powerful yet easy to use Retrieval software quickly gets you just the information you need. Retrieval interfaces with the entire line of NAVCO digital video recorders, giving you the flexibility to use the right NAVCO product for you without requiring additional software training. |
| Predictable Storage | Separate and independently configurable storage of transactions, general surveillance, and alarm events provide predictable storage time. Know how long your recordings will last. Don't be left guessing. |
| Assured Operation | Imagine electronically sending a technician out to each NAVCO digital recorder as often as you like for free. NAVCO's model 5300 Diagnostic Server software electronically polls each site and ascertains the status of vital systems and reports defined malfunctions to your computer screen, pager, email, or fax in seconds. A clear NAVCO advantage. |
| Transaction Interface | NAVCO has developed more interfaces to ATM machines and teller lines than anyone else in the business. Many of our interface solutions are out of the box, requiring little or no development time. |

Additional Features & Options

- Compliant with FBI and police evidence requirements.
- Multiple ATM/Teller interfaces built in. No extras to purchase.
- Look in while recording. Even record what you see on your PC.
- Completely network compatible. Preferred by IT departments.
- Image quality adjustable. Maximize storage and image quality.
- "Quick Search" database for transaction and event investigations.
- Save evidence to a file reviewable by anyone with a PC running Microsoft 95/98/NT/2000/XP
- Network friendly "connect list". Your site list can be available to anyone you desire over your network.

AVAILABLE MODELS

Model	Number of Cameras	Available Hard Drives (Hard drive size calculator available)	All models provide: 4 alarm inputs 4 alarm outputs 4 RS-232/DB25 interfaces built in
5008	8	160/320/500 GB	
5016	16	160/320/500/1000 GB	

To order a DVSR that has an 8 camera capacity with a 320 gig hard drive simply order a 5008-320.

5008/5016

Video Output: One Composite BNC
 Connections: Ethernet 10/100BaseT
 POTS Available
 Compression: JPEG
 Resolution: 320x240 16 Bit True Color
 Dimensions: 16.25"(H) x 16.25"(W) x 8.5"(D)
 Power: 115VAC (60 Hz)

Optional DVSR Accessories:

5090 DVSR Accelerator Module

- Increases the image capture rate of a 5008 or 5016 Series DVSR to 10 images per second

DVSR-LB

Secure Cover -
 Converts the DVSR
 into a secure lock
 box configuration

Dimensions: 22"(H) x 16.25"(W) x 8.5"(D)

Retrieval - Client software allowing remote review of live or recorded images. One copy included with each DVSR.
